## Description

### 2023 MAXXD Trailers DJX DJX8314

#### The All Around Dump Trailer

The DJX is one of our most popular dump trailers, and can be hauled with a 3/4 ton truck. It's great for a variety of uses, like hauling a skid steer or mini excavator, or mulch, topsoil, gravel or even busted concrete and heavy debris. Based on an 8" I-beam frame, the DJX includes heavy duty features like an industry-leading 6" scissor hoist. We house the KTI hydraulic pump and Interstate battery in a unique full-width, internally split toolbox. This protects the heart of the hydraulics system and provides a convenient place for chains and other important tools.

You can also choose to outfit the DJX with 2', 3' or 4' tall Tuff Sides. These sides provide a massive 3" top cap surface that wraps partially down the side of the trailer. These top rails are then supported with flared steel side supports. Combined, they help form a bed that's extremely resistant to warping, dents, and damage. All of our dumps come equipped with tarp kits as a standard feature.

We build each DJX with a standard GVWR of 14,000 lbs and twin 7K electric brake axles. You can configure these versatile dumps in lengths of 12', 14', and 16' with base weights ranging from 4,150 lbs to 4,550 lbs.

Like all MAXX-D Trailers, the DJX I-beam dump model is Texas made and is finished with our industry-leading powder coating process. Six different steps all work together to give your trailer a premium powder-coated steel surface with unmatched durability.

Through our expansive dealer network, we give you the option to configure your DJX low profile dump trailer with a variety of options to fit your needs. Whether it's an extra set of D-rings, solar battery charger, or your choice of side height and configuration, you can get a DJX that's perfect for whatever it is you're building.
