Description

2023 MAXXD Trailers DTX DTX8314

Maximum Dumping Leverage

The DTX is a durable but simple dump trailer that you can haul with a 3/4 or heavier truck. The stand out feature of the DTX is its telescoping cylinder up front, which gives this dump massive dumping leverage. Based on an 8" I-beam frame, the DTX features a heavy duty direct-push telescoping cylinder. The direct-push cylinder design puts less stress on the trailer, and easier tilting of the dump bed. We house the KTI hydraulic pump and Interstate battery in a unique full-width, internally split toolbox. This protects the heart of the hydraulics system and provides a convenient place for chains and other important tools.

You can also choose to outfit the DTX with 4' tall Tuff Sides, but not 2' sides. These sides provide a massive 3" top cap surface that wraps partially down the side of the trailer. These top rails are then supported with flared steel side supports. Combined, they help form a bed that's extremely resistant to warping, dents, and damage. All of our dumps come equipped with tarp kits as a standard feature.

Like all MAXX-D Trailers, the DTX I-beam dump model is Texas made and is finished with our industry-leading powder coating process. Six different steps all work together to give your trailer a premium powder-coated steel surface with unmatched durability.

Through our expansive dealer network, we give you the option to configure your DTX low profile dump trailer with a variety of options to fit your needs. Whether it's an extra set of D-rings, solar battery charger, or your choice of side height and configuration, you can get a DTX that's perfect for whatever it is you're building.

We build each DTX with a standard GVWR of 14,000 lbs and twin 7K electric brake axles. You can configure these versatile dumps in lengths of 12', 14', and 16' with base weights ranging from 4,750 lbs to 5,150 lbs.
